# **GemBuilder<sup>TM</sup> for Smalltalk/VA Release Notes**

**Version 5.4.7**

September 2023

## INTELLECTUAL PROPERTY OWNERSHIP

This documentation is furnished for informational use only and is subject to change without notice. GemTalk Systems LLC assumes no responsibility or liability for any errors or inaccuracies that may appear in this documentation.

Warning: This computer program and its documentation are protected by copyright law and international treaties. Any unauthorized copying or distribution of this program, its documentation, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted under the maximum extent possible under the law.

The software installed in accordance with this documentation is copyrighted and licensed by GemTalk Systems under separate license agreement. This software may only be used pursuant to the terms and conditions of such license agreement. Any other use may be a violation of law.

Use, duplication, or disclosure by the Government is subject to restrictions set forth in the Commercial Software - Restricted Rights clause at 52.227-19 of the Federal Acquisitions Regulations (48 CFR 52.227-19) except that the government agency shall not have the right to disclose this software to support service contractors or their subcontractors without the prior written consent of GemTalk Systems.

This software is provided by GemTalk Systems LLC and contributors “as is” and any expressed or implied warranties, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose are disclaimed. In no event shall GemTalk Systems LLC or any contributors be liable for any direct, indirect, incidental, special, exemplary, or consequential damages (including, but not limited to, procurement of substitute goods or services; loss of use, data, or profits; or business interruption) however caused and on any theory of liability, whether in contract, strict liability, or tort (including negligence or otherwise) arising in any way out of the use of this software, even if advised of the possibility of such damage.

## COPYRIGHTS

This software product, its documentation, and its user interface © 1986-2023 GemTalk Systems LLC. All rights reserved by GemTalk Systems.

## PATENTS

GemStone software has been covered by U.S. Patent Number 6,256,637 “Transactional virtual machine architecture” (1998-2018), Patent Number 6,360,219 “Object queues with concurrent updating” (1998-2018), Patent Number 6,567,905 “Generational garbage collector with persistent object cache” (2001-2021), and Patent Number 6,681,226 “Selective pessimistic locking for a concurrently updateable database” (2001-2021).

## TRADEMARKS

**GemTalk**, **GemStone**, **GemBuilder**, **GemConnect**, and the GemStone and GemTalk logos are trademarks or registered trademarks of GemTalk Systems LLC, or of VMware, Inc., previously of GemStone Systems, Inc.

**UNIX** is a registered trademark of The Open Group.

**Intel** is a registered trademarks of Intel Corporation.

**Microsoft**, **Windows**, and **Windows Server** are registered trademarks of Microsoft Corporation.

**Linux** is a registered trademark of Linus Torvalds and others.

**Red Hat**, **Red Hat Enterprise Linux**, **RHEL**, and **CentOS** are trademarks or registered trademarks of Red Hat, Inc.

**AlmaLinux** is a trademark or registered trademark of AlmaLinux OS Foundation.

**Rocky Linux** is a trademark or registered trademark of Rocky Enterprise Software Foundation.

**Ubuntu** is a registered trademark of Canonical Ltd., Inc.

**AIX**, **Power**, **POWER**, **Power8**, **Power9**, and **VisualAge** are trademarks or registered trademarks of International Business Machines Corporation.

**Apple**, **Mac**, **macOS**, and **Macintosh** are trademarks of Apple Inc.

**Instantiations** is a registered trademarks of Instantiations, Inc.

**CINCOM**, **Cincom Smalltalk**, and **VisualWorks** are trademarks or registered trademarks of Cincom Systems, Inc.

Other company or product names mentioned herein may be trademarks or registered trademarks of their respective owners. Trademark specifications are subject to change without notice. GemTalk Systems cannot attest to the accuracy of all trademark information. Use of a term in this documentation should not be regarded as affecting the validity of any trademark or service mark.

## About This Documentation

These Release Notes describe the changes in the GemBuilder™ for Smalltalk/VA version 5.4.7 release.

For information on installing or upgrading to this version of GemBuilder for Smalltalk, please refer to the *GemBuilder for Smalltalk Installation Guide* for version 5.4.7.

## Technical Support

### Support Website

#### [gemtalksystems.com](http://gemtalksystems.com)

GemTalk's website provides a variety of resources to help you use GemTalk products:

- ▶ **Documentation** for the current and for previous released versions of all GemTalk products, in PDF form.
- ▶ **Product download** for the current and selected recent versions of GemTalk software.
- ▶ **Bugnotes**, identifying performance issues or error conditions that you may encounter when using a GemTalk product.
- ▶ **Supplemental Documentation** and **TechTips**, providing information and instructions that are not in the regular documentation.
- ▶ **Compatibility matrices**, listing supported platforms for GemTalk product versions.

We recommend checking this site on a regular basis for the latest updates.

## Help Requests

GemTalk Technical Support is limited to customers with current support contracts. Requests for technical assistance may be submitted online (including by email), or by telephone. We recommend you use telephone contact only for urgent requests that require immediate evaluation, such as a production system down. The support website is the preferred way to contact Technical Support.

**Website:** [techsupport.gemtalksystems.com](http://techsupport.gemtalksystems.com)

**Email:** [techsupport@gemtalksystems.com](mailto:techsupport@gemtalksystems.com)

**Telephone:** (800) 243-4772 or (503) 766-4702

Please include the following, in addition to a description of the issue:

- ▶ The versions of GemBuilder for Smalltalk and of all related GemTalk products, and of any other related products, such as client Smalltalk products, and the operating system and version you are using.
- ▶ Exact error message received, if any, including log files and statmonitor data if appropriate.

Technical Support is available from 8am to 5pm Pacific Time, Monday through Friday, excluding GemTalk holidays.

## 24x7 Emergency Technical Support

GemTalk offers, at an additional charge, 24x7 emergency technical support. This support entitles customers to contact us 24 hours a day, 7 days a week, 365 days a year, for issues impacting a production system. For more details, contact GemTalk Support Renewals.

## Training and Consulting

GemTalk Professional Services provide consulting to help you succeed with GemStone products. Training for GemStone/S is available at your location, and training courses are offered periodically at our offices in Beaverton, Oregon. Contact GemTalk Professional Services for more details or to obtain consulting services.

## *Chapter 1. Release Notes for GemBuilder for Smalltalk 5.4.7*

<i>Supported Platforms and Versions</i>	7
<i>Changes in this Release</i>	8
Support for GemStone/S 64 Bit v3.7 . . . . .	8
Customer-defined special classes . . . . .	8
Add User changes . . . . .	8
Security Policy Tool updated . . . . .	8
Configuring TrackReads supported . . . . .	8
Some Security Policies did not report the correct name . . . . .	8
SecurityPolicies displayed incorrect owner . . . . .	8
VAST 11.x new UnicodeStrings mapped to server Unicode strings . . . . .	8
Removed methods . . . . .	9
GbsSessionManager >> gbxWaitForRebinding removed . . . . .	9
Deprecated GBSM methods removed . . . . .	9
<i>Bugs Fixed</i>	10
GS-file In did not handle server fileout format . . . . .	10
isENVYImage incorrectly used . . . . .	10
Server configuration for GEM_HALT_ON_ERROR unset during login . . . . .	11
Building ICs for packaging a runtime application created problems for method overrides. . . . .	11
Compiler errors in method text not handled correctly . . . . .	11
Improved resizing in Classes Browser . . . . .	11
Click in method text selected text. . . . .	11
Inspector Errors with server strings containing characters over 255 . . . . .	11
Selecting a SymbolDictionary with many classes could be slow to display classes. . . . .	11
Classes > Browse Class on a class method in Method List Browser broken . . . . .	11

Privileges dialog did not handle added privileges . . . . . 11

Issues with server methods that include server-only elements . . . . . 12

    Lose selection in classes browser . . . . . 12

    Implementors/Senders browsers did not update method text. . . . . 12

Extra stacks while editing server code in the debugger. . . . . 12

LargeIntegers converted to a denormalized server representation . . . . . 12

Analysis of server Class format could result in wrong match comparison. . . . 12

Classes Browser stuck if server SymbolDictionary with unmatched key to  
classname . . . . . 12

# Release Notes for GemBuilder for Smalltalk 5.4.7

GemBuilder™ for Smalltalk (GBS) version 5.4.7 is a new version of the GemBuilder for Smalltalk product, adding support for GemStone/S 64 Bit version 3.7, as well as fixing a number of bugs. Please take time to read through these release notes before installing or upgrading, to acquaint yourself with the changes.

These release notes provide changes between the previous version of GBS, version 5.4.6, and version 5.4.7. If you are upgrading from a version prior to 5.4.6, please also review the release notes for each intermediate release to see the full set of changes.

This release supports applications running with Instantiation's VAST Platform (VA Smalltalk) only. Version 5.4.7 does not support VisualWorks, nor can it be used with GemStone/S 64 Bit 2.x or 32-bit GemStone/S. Support for these servers is provided in separate GBS releases.

To install GemBuilder for Smalltalk 5.4.7, follow the instructions in the *GemBuilder for Smalltalk Installation Guide* for version 5.4.7.

## Supported Platforms and Versions

The following tables describe the client Smalltalk versions and platforms supported by GBS 5.4.7, and the GemStone server versions that can be used with each. For more details, see the *GemBuilder for Smalltalk Installation Guide* for version 5.4.7.

**Table 1 Supported GemStone/S 64 Bit Server versions - RPC logins only**

	32-bit VAST Platform 11.0.1	32-bit VAST Platform 10.0.2	32-bit VA Smalltalk 8.6.3
<b>Windows 16</b>	3.7, 3.6.6	3.7, 3.6.6	3.7, 3.6.6
<b>Windows 10</b>	3.7, 3.6.6	3.7, 3.6.6	3.7, 3.6.6

## Changes in this Release

### Support for GemStone/S 64 Bit v3.7

This release adds support for GemStone/S 64 Bit v3.7.

#### Customer-defined special classes

GBS v5.4.7 handles the new customer-defined special classes introduced in GemStone/S 64 Bit v3.7. Note that these specials cannot be replicated, but inspectors can display them as server objects.

### Add User changes

The User Dialog has some changes in behavior and labels.

- ▶ The OK button previously performed a commit before adding a new user, but did not commit the added user to the repository. Now, the OK button adds the user without performing any commits. This spurious commit did not occur when editing a user.
- ▶ The **Commit And Apply** button previously performed a commit before adding the new user, but did not commit the new user. Now this button is labeled **Apply And Commit**, and does commit the new user.
- ▶ The **Close** button is now **Cancel**, for clarity. As before, changes are discarded.

### Security Policy Tool updated

#### Configuring TrackReads supported

Object Read Tracking (see <https://docs.gemtalksystems.com/current/objectreadtracking>) can now be configured using the security policy tool.

#### Some Security Policies did not report the correct name

There were some GemStone kernel security policies which did not display their name.

#### SecurityPolicies displayed incorrect owner

Security Policy Tool displayed the current user as owner of all GsObjectSecurityPolicies. (#50373)

### VAST 11.x new UnicodeStrings mapped to server Unicode strings

VAST 11 introduced the class UnicodeStrings, and support for converting Strings to UnicodeStrings. With v5.4.7, server instances of Unicode7, Unicode16 and Unicode32 map to client UnicodeStrings.

## Removed methods

### **GbsSessionManager >> gbxWaitForRebinding removed**

This method was required to avoid transaction protocol errors with some much older versions of VA Smalltalk, but is no longer needed, and has been removed.

### **Deprecated GBSM methods removed**

The following deprecated methods have been removed. These methods were pass-throughs to the equivalent GbsConfiguration methods, which should be used instead.

```
GbsSessionManager >> assertionChecks

```

## Bugs Fixed

### GS-file In did not handle server fileout format

The server default class fileout format changed in v3.6 to use topaz commands rather than GemStone execution to remove existing methods. This topaz command was not handled correctly in GBS; using the popup menu item **GS-file In** or **GemStone > Tools > GS File in** would error. (#50354)

### isENVYImage incorrectly used

The method `isENVYImage` was used in places to detect a VAST image, rather than the more appropriate `isVisualAgeImage`. #(49391)

## Server configuration for GEM\_HALT\_ON\_ERROR unset during login

The GEM\_HALT\_ON\_ERROR configuration parameters can be set in the Gem to allow stacks to be dumped for a server error. This setting was overridden and disabled on login from GBS. (#50417)

## Building ICs for packaging a runtime application created problems for method overrides

During runtime application IC packaging, GBS's method overrides were creating problems. The method override functionality signaled a method notification, which signalled back to the framework, creating a stack overflow. Now, the method change notifications are ignored while installing method overrides. (#49405)

## Compiler errors in method text not handled correctly

Compiler errors in method text should insert the appropriate error message in the place within the method text that the error is found. Due to changes in the information returned by the server, an incorrect messages was being inserted in the incorrect location. CHECK FOR UPGRADED SYSTEM (#49419)

## Improved resizing in Classes Browser

The center radio buttons and class/instance button resized proportionally. Now, these keep their size as the window is larger or smaller. (#49788)

## Click in method text selected text

In the Classes browser, when left-clicking within the method text pane that had not been clicked within previously, all or part of the method text from start up to the click location was highlighted. (#49776)

## Inspector Errors with server strings containing characters over 255

GemStone DoubleByteStrings, and Unicode16 strings that contained characters with codePoints greater than 255, would cause Inspector errors. (#49789)

## Selecting a SymbolDictionary with many classes could be slow to display classes

Selected a SymbolDictionary that contained a large number of classes, such as Globals, could take a considerable time to display the list of classes over slower connections. (#50410)

## Classes > Browse Class on a class method in Method List Browser broken

When a Class method is selected in a Method List Browser, the **Classes** menu item **Browse Class** resulted in a walkback. (#50429)

## Privileges dialog did not handle added privileges

The privileges dialog was not sized to accommodate all privileges. (#49908)

## Issues with server methods that include server-only elements

GBS was using the VAST parser to identify the method selector from within the method text. If the method text included sever-only elements such as class names, this returned nil but did not error. (#49410)

### Lose selection in classes browser

Compiling a method in the classes browser correctly compiled the method on the server. However, when the classes browser was updated, the selector was not found and the newly compiled method was not selected. (#49778)

### Implementors/Senders browsers did not update method text

When a method was recompiled in the senders or implementors browser, the original method text continued to be displayed, although the method itself had been updated with the new source. (#49777)

## Extra stacks while editing server code in the debugger

When editing GemStone server method code in a debugger, extra stacks may appears with top frames "GbsObject does not understand classVarNames". This was due to VA Code Assist incorrectly trying to determine information about the server method. (#49806)

## LargeIntegers converted to a denormalized server representation

LargeIntegers in the range 16r8000000000000000 through 16rFFFFFFFFFFFFFFFF were converted to a denormalized form with four trailing 0s, as a result of incorrect handling between the VA and server representations (#50484)

## Analysis of server Class format could result in wrong match comparison

GBS determines if a server and client classes match (that is, are the same) by analyzing information such as class name, instance variables, and server format bits. The analysis of the format bits was not correct, resulting in classes failing to match and requiring re-syncing. (#40436)

## Classes Browser stuck if server SymbolDictionary with unmatched key to classname

If a server SymbolDictionary contains a key referencing a Class whose name is different, and there is no key with that Class's name in that SymbolDictionary, the Browser reported an error and retried. (#50689)
